

Boxed Display Assembly

Assembly Instructions

Assemble as pictured below. We recommend using a high quality tape such as gorilla tape for all fusing connections. Lay fireworks on ground in any order you wish, we recommend starting with smaller items and ending with larger finale type items. Start by fusing fountains first and work your way towards the finale or larger display cakes following the recommended spacing. We recommend 10" of 30 second per foot green safety fuse between items. When you are ready for a finale fuse them much closer together. Make sure to leave about 6" fuse in front of fountains for ample time to retreat to a safe distance. Use Pink fast fuse to connect Items to main "trunk" line or slower green fuse.

When joining one fuse to another always face end of joining fuse towards the direction the fire will be coming from. Secure all items by driving a wood grade stake into the ground and wrap 2x with gorilla tape to prevent tipping. We recommend 200' distance between the fireworks and the spectators or any structures. DO not approach fireworks for 5 minutes if fuse burns out to relight. Follow all other manufacturers instructions on label.

Premium Boxed Firework Displays

- Noisy Neighbor Display-
- Blockbuster Display-
- Master Blaster Display-
- 4th Of July Spectacular Display-

We provide all pyro, materials and instructions for setting up our boxed Displays, all you will need is a roll of tape to connect the fuses!
